

Igor Potard

Junior Software Engineer - medical imaging, rendering and graphical interaction

Paris, France | igor.potard@gmail.com | +33 6 68 40 33 38
github.com/Serra-P | serra-p.github.io | linkedin.com/in/igor-potard

Profile

Computer engineering student at EPITA focused on medical imaging, image processing/visualization and graphical interaction. R&D experience at GE HealthCare on proof-of-concepts aimed at making medical-viewer interactions smarter and more efficient for radiologists.

Professional Experience

GE HealthCare - R&D Software Engineering Intern, Imaging Fabric

Mar. 2026 - Sep. 2026

Buc, France - Imagine Fabric team

- Researched and prototyped R&D proof-of-concepts to improve radiology-viewer interactions and make radiologist workflows simpler, faster and more effective.
- Worked across the full stack: TypeScript/CSS interfaces, viewer integration, front/back pipeline, C++ processors and local deployments.
- Analyzed usage data and metrics to compare workflows, measure time/accuracy/actions and guide product and UX iterations.
- Explored AI/ML and contextual-assistance approaches; presented to UX, product, engineering and clinical stakeholders; contributed to multiple patent applications.

EPITA - Programming Teaching Assistant, ACU & YAKA

Feb. 2025 - Feb. 2026

Paris, France

- Mentored first-year engineering-cycle students (Bac+3 level) on C, C++, Java, SQL and JavaScript projects.
- Provided technical guidance, code reviews, project methodology support and regular help sessions.

JuneCare - Full-Stack Developer Intern

Sep. 2024 - Feb. 2025

Paris, France

- Developed an insurance-management web application embedded into partner workflows through customized popups.
- Built JavaScript/HTML/CSS interfaces, accelerated prototypes with no-code tools, designed APIs and used AWS for deployment and hosting.

Education

EPITA - Graduate School of Computer Science

Sep. 2020 - Jul. 2026

Engineering degree, specialization in image processing and computer graphics

Ajman University - International semester in computer engineering

Feb. 2023 - Jul. 2023

Ajman, United Arab Emirates

Selected Projects

CUDA Image Processing - CUDA, C++

GPU image filters including Gaussian blur, NLMeans, selective blur and motion-detection experiments without machine learning.

Fluid Simulation and Raytracing - C++

Physics-based fluid simulation and raytracer rendering pipeline for realistic image generation.

Subway-Cuber - C++, OpenGL

3D endless-runner inspired by Subway Surfer, with real-time rendering, camera control, obstacles, collisions and gameplay loop.

Infinite Canvas Editor - TypeScript, React, Canvas 2D

Visual editor with pan/zoom/rotation, object creation and selection, animations and Jest tests.

Twitter-like Social Network - Java

Object-oriented social application implementing core feed, posting, interaction and user-management mechanics.

Skills

Languages: C++, C, Python, Java, C#, TypeScript, JavaScript, CUDA, SQL, Bash

Imaging and graphics: OpenGL, WebGL, Canvas 2D, image processing, raytracing, simulation, real-time rendering

Web and tools: React, HTML/CSS, Node.js, Docker, AWS, Git, Linux, GitLab CI/CD, Figma, Rally

Methods: R&D prototyping, monorepo integration, MVC architecture, data analysis, AI/ML, user testing, patents

Languages and Involvement

Languages: French native, Russian fluent, English C1.

Involvement: member of Prologin / Girls Can Code, programming outreach and educational workshops for young students.

Interests: gymnastics, cinema, music.
